Re: Semiannual Gift of Travel Report

To Whom It May Concern:

Please allow this to serve as the Defense Intelligence Agency's gifts of travel report for the reporting period beginning April 1, 2013 and ending September 30, 2013. The reportable information is contained in the attached 326 Standard Forms.

Please note that public release of the information contained in the attachments – including names of DIA personnel – may be precluded by statute and requires review and approval by DIA prior to release.

Thank you and please contact me with questions.

Very Respectfully,

(b)(3):10 USC 424; (b)(6)

Attachments : as stated.

Re: Semiannual Gift of Travel Report

To Whom It May Concern:

Please allow this to serve as the Defense Intelligence Agency's gifts of travel report for the reporting period beginning October 1, 2013 and ending March 31, 2014. The reportable information is contained in the attached 326 Standard Forms.

Please note that public release of the information contained in the attachments – including names of DIA personnel – may be precluded by statute and requires review and approval by DIA prior to release.

Thank you and please contact me with questions.

Sincerely,

(b)(3):10 USC 424; (b)(6)

(U) Syria/Iraq: Emerging Anti Tank Guided Missile (ATGM) Threat

(U) Executive Summary

(S// There has been a major increase in the usage of Anti-Tank Guided Missile (ATGM) systems by regime forces, opposition groups, and terrorist organizations in Syria since March 2012.

Sec. 1.4(a)

(U) This assessment is based on the all source analysis of non-state use of ATGMs in the Syrian conflict, over a three-year period from March 2012 to February 2015.

(b)(3):10 USC 424

ICOD: 20 March 2015
DIA-15-1504-031

Only the U.S. Government may declassify this product. Forward declassification requests to the Defense Intelligence Agency.

(b)(3):50 USC 3024(i)

(U) SCOPE NOTE/TOPIC BACKGROUND

(U) This report is intended to communicate the increased threat of ATGM usage in the CENTCOM AOR. This report does not specifically address the current ATGM threat in Iraq, but uses the Syrian conflict as the analytical test bed for the potential proliferation of systems, TTPs, and trained non-state groups to neighboring countries within the CENTCOM AOR.

(U) KEY ASSUMPTIONS

(U) The entirety of this analysis assumes that non-state groups operating in Syria maintain a steady flow of ATGMs by both internal and external means.

(U) METHODOLOGY

(U) The preponderance of the assessments in this report resulted from the observation, and analysis of over 900 videos of non-state ATGM firings in social media from Syria. Additionally, previous reporting and analysis enabled assessments for the way ahead for the ATGM threat in the CENTCOM AOR, and provided analytical support for past, current, and potential trends for proliferation of advanced precision munitions.^{1, 2, 3, 4}

DEFENSE INTELLIGENCE

28 May 2015

(U) Syria/Iraq: Emerging Anti Tank Guided Missile (ATGM) Threat

(U) SOURCE SUMMARY AND CONFIDENCE LEVEL STATEMENT

(U) We believe that the use of ATGMs by non-state/opposition elements and extremist groups will continue in Syria. Additionally, we believe that the use of ATGMs by non-state and extremist groups in Iraq will increase, and groups are likely to target U.S. interests including personnel, equipment, and infrastructure.

(U) Source Endnotes	37

1.0 (U) Overview

(U) Over 900 ATGM firings by non-state groups have been observed during the Syrian conflict, based on analysis of social media. These videos are only a portion of the overall ATGM usage during the conflict. The ease of deployment, long range accuracy and precision, combined with lethality of these ATGM systems has made them the preferred weapons for use against a variety of targets.^{5, 6}

(U) The usage of ATGMs in Syria is likely to continue unless the foreign supply of systems is significantly reduced. Analysis of social media indicates that ATGMs are being used by non-state groups across the border in Iraq. Extremist capture of ATGMs in Northern Syria also increases the risk of cross border deployment of ATGMs into Iraq.⁷

(U) If current trends continue, we believe the continued use of ATGMs in Syria will result in cross border deployment to Iraq, increasing the threat to U.S. personnel, equipment and facilities. If the effectiveness of these systems continues to be widely publicized in social media, it is likely that both equipment, and operators will transition to other conflicts around the world.

(U) This report is written to raise awareness of the increasing threat of ATGMs by non-state actors and extremist organizations. The short term (1-2 years) mitigation of this threat includes increased use and practice of maneuver based countermeasures by maneuver elements, and increased force protection measures for static locations. The midterm (2-5 years) mitigation of this threat involves wide proliferation of both technological and maneuver based countermeasures, with long term (6-10 years) focus on continued improvement of active protection systems, for asymmetric and conventional use of ATGM systems.

2.0 (U) ATGM Systems in Syria

2.1 (U) OVERVIEW

(U) Syrian opposition elements have implemented a dramatic increase in ATGM use since 2012. Analysis of over 900 ATGM firings, seen in social media, demonstrates the use of 8 different ATGM systems.^{8, 9}

(U) The top 3 ATGM systems in use in Syria are the Russian Konkurs, Chinese Red Arrow 8 and the U.S. TOW.^{10, 11}

2.2 (U) ATGM CAPABILITIES

(U) The types and capabilities of ATGMs in Syria vary by system. The effectiveness of each system will be determined by its guidance, range, warhead, and portability.

2.2.1 (U) Guidance

(b)(3):10 USC 424

(U) Unlike rockets and rocket propelled grenades (RPGs), ATGMs provide the operator with the ability to guide the missile, manually or automatically, onto the target after it has been launched. This attribute provides both improved accuracy and range.

~~(C)~~ [] The guidance method of the missile varies by system and it will help determine the likely accuracy and required training of an operator.

(b)(3):10 USC 424

(b)(1)1.4(c)

~~(C)~~ [] MCLOS systems require the operator to manually track the missile and directly control it in flight so it hits the intended target.

(b)(3):10 USC 424

(b)(1)1.4(c)

~~(C)~~ [] SACLOS systems include a more complex launcher that will track the missile in flight and "fly" it towards the target. The gunner simply has to maintain his crosshairs on the target throughout the time of flight, while the launcher will fly the missile to align with the gunner's crosshairs. The launcher can communicate with the missile through a wire, Radio Frequency (RF), or laser.

(b)(3):10 USC 424

(b)(1)1.4(c)

~~(C)~~ [] In LBR systems, the missile is not directly controlled in flight by the launcher. Instead, a coded laser beam is projected by the launcher at the target. The bottom of the missile has a laser beam detector which detects the coded laser beam and calculates its position error. The missile then makes alterations to its

(U) Syria/Iraq: Emerging Anti Tank Guided Missile (ATGM) Threat

direction of flight to remain centered within the laser beam until target impact.

(b)(1)1.4(c)

2.2.2 (U) Range

(U) The range of an ATGM system allows the operator a greater degree of standoff from the target he is engaging when compared with an improvised explosive device (IED) or an RPG. The maximum range of most ATGM systems are often in excess of the retaliation range of even tank main armaments, making them ideal to engage high profile targets at longer range.

(U) The maximum range of an ATGM system can be interpreted in 2 key areas: actual maximum range and the tactical employment maximum range. The actual maximum range is determined by the length of the command link, the aerodynamics of the missile, and the available propulsion in the system. The tactical employment maximum range will be concerned with the optics used, visibility, and terrain.

(b)(1); (b)(3):10 USC 424; Sec. 1.4(c)

2.2.3 (U) Warhead

(U) Traditionally, ATGMs are optimized for the defeat of armored vehicles by the direct explosive penetration of armor. However, some ATGMs have been designed or modified either to deliver anti-armor effect in a different way or to deliver an alternative type of warhead optimized for use against an entirely different type of target set .

(b)(3):10 USC 424; (b)(1); Sec. 1.4(c)

(U) An ATGM that is fitted with one HEAT charge has a unitary warhead. An ATGM missile with a large HEAT warhead and a second smaller pre-cursor charge has a tandem warhead.

(b)(1); (b)(3):10 USC 424; Sec. 1.4(c)

(b)(3):10
USC 424

~~(S)~~ An increasing number of ATGMs are being fitted with "enhanced blast" (thermobaric) warheads. ATGMs with enhanced blast charges are particularly useful against structures. It is unclear if they have been

(U) Syria/Iraq: Emerging Anti Tank Guided Missile (ATGM) Threat

employed in Syria and Iraq

(b)(1)1.4(c)

2.2.4 (U) Portability

3.2 (U) ANALYSIS

(b)(3):10 USC 424; (b)(1); Sec. 1.4(c)

(U) As the Syrian opposition forces continue to share ATGM attack tactics, techniques, and procedures (TTPs) on social media, they create opportunities for non-state actors and extremist organizations to study and apply best practices in other areas of operation. There is an increasing number of trained and combat experienced ATGM operators with a regionally transferable skill set. If the conflict in Syria reaches a stalemate or conclusion, there is a high likelihood of ATGM operators transferring to neighboring countries such as Iraq.

3.3 (U) TRENDS

(U) An adversary's ability to study and observe ATGM engagements in social media is directly proportional to his ability to influence training in multiple conflict areas. Although many extremist organizations already have access to ATGMs, there is an increased risk with their ability to refine TTPs, adopt best practices, and dynamically change their operating environment.

6.0 (U) Target Selection

6.1 (U) OBSERVATIONS

(U) Analysis of over 900 ATGM firings by opposition and non-state actors demonstrates a consistent trend of tanks as the priority selection for ATGM engagements. Although video quality decreases pinpoint accuracy of the intended target, 54% of the over 900 ATGM engagement video displayed the targeting of Syrian regime tanks.⁴⁷

(b)(3):10 USC 424; (b)(1); Sec. 1.4(c)

9.2 (U) RECOMMENDATIONS

(U) The ATGM threat in the CENTCOM AOR requires a multi-faceted approach to mitigate the effectiveness of opposing ATGMs. In the short term, it is vital to improve the awareness of the threat of ATGM engagements among the Intelligence Community, deployed forces, and US interests in conflict areas.

(b)(3):10 USC 424; (b)(1); Sec. 1.4(c)

DEFENSE INTELLIGENCE

28 May 2015

(U) Syria/Iraq: Emerging Anti Tank Guided Missile (ATGM) Threat

(U) The revision of current TTPs and incorporating them into the doctrine and training of the armed services is recommended in order to help reduce that probability of being engaged. It is recommended that these TTPs should be considered in conjunction with all other threats.

(U//~~FOUO~~) Syria: Comparing ATGM Non-State Usage For 3rd Quarter FY14, FY 15

(U) Antitank Guided Missile (ATGM) firings by non-state groups in Syria changed considerably between 2014 and 2015. According to the analysis of open source videos, the U.S. TOW 2A has become the dominant system used by non-state groups in Syria, which we assess is due to its higher availability and proven performance. Additionally, average engagement ranges have increased, which we believe reflects increased user confidence and proficiency by non-state ATGM gunners.

(U) ATGM NON-STATE USAGE TRENDS BY SYSTEM TYPE

(U) Non-state groups operating within the Syrian conflict have demonstrated proficiency with multiple types of ATGMs, but most are now trending towards the TOW 2A. In Apr-Jun 2014, the dominant systems used were the Russian Konkurs/-M, the Chinese Red Arrow-8, and the U.S. made TOW 2A. When examining the same firing period for 2015, system usage trends changed significantly, with the Konkurs and Red Arrow-8 systems representing only 6% of total firings. Analysis of TOW 2A firings between 3rd Quarter FY 14 and FY 15 demonstrates a 50% change, with TOW 2A firings (compared to other systems) representing 72% of Syrian conflict related ATGM firings in the open source.^{1, 2}

(U) ATGM FIRING OF INTEREST INDICATES REGIME IMPLEMENTING ATGM COUNTERMEASURES

(U) In May 2015, elements of the Free Syrian Army's 13th Division engaged a Syrian Arab Army (SAA) tank platoon, probably operating near Aleppo in northwestern Syria. This engagement represents the first indicators that the SAA is adjusting its tactics, techniques, and procedures to the emerging and asymmetric ATGM threat. After a successful TOW ATGM attack against a SAA T-55 (causing a high order detonation in the tank), the remaining tank in the formation was able to escape the impact of a second TOW ATGM attack using maneuver and concealment. Although 13th Division ATGM gunners launched a second ATGM, we believe the attack was unsuccessful, due to maneuver based countermeasures implemented by the SAA tank commander.⁷
